Description of the MFMS

A menu driven console application written in ANSI C (C99) that manages the core financial records of a municipal: employees and salaries, departmental budgets, suppliers and the asset register, with summary reports.

Features

- Main menu with clear navigation and invalid-choice handling
- Employees: add, display, search (ID/ Name / department), Salary calculations (gross, pension, tax, net)
- Budgets: enter budgets and expenditure, remaining balance, status, over budget detection
- Suppliers: add (email/ phone validation), display, search, compare two suppliers
- Assets: add, display, search (ID / name / type / department /condition)
- Reports: employee, budget, supplier, asset
- Input validation on every field (negative values, empty text, non-numeric input, duplicates)
- Option 9 loads sample data quick demonstration

Compilation

from the project folder:

gcc –std=c99 –Wall –Wextra –pedantic –o mfms main.c utils.c employees.c budget.c suppliers.c assets.c reports.c

HOW TO RUN

./mfms

Choose a nu,ber from the main menu (1 to 5 for a module, 6 to exit).

Each module has its own menu and a “Back” option

ındividual responsibilities

Member

Josephine Lifumbela	**Employee management (employee.c employee.h**
Joia Coimbra	**Budget Management (budget.c, budget.h)**
Umar Sabano	**Supplier Management (supplier.c, supplier.h)**
Ngoy E Kabamba	Assest Management (assets.c, assets.h)
Samuel Aishe	Reports(reports.c, reports.h)
Kennedy K shikongo	Intergration and validation (main.c, utils.c, utils.h)

Tjimezeri Muhupua	Testing (second-round testing and test recordd, TEST.md

Limitations

- Data is kept in memory only. Everything entered is lost when the program closes. Saving files is left for project B.
- Maximum sizes are fixed (for example, 100 assests, 100 budgets, 100 suppliers).

Testing

TEST.md
